INDEX TO AUTHORS

A

Alfin-Slater, Roslyn B. See *Rice, Schotz, Alfin-Slater, and Deuel,* 867

Ashwell, Gilbert, and **Hickman, Jean.** The properties of spleen adenosinetriphosphatase and the effect of x-irradiation, 651

Axelrod, Leonard R. The quantitative separation of estrogens by paper partition chromatography, 59

B

Baker, Carl G. See *Koegel, Birnbaum, Baker, Sober, and Greenstein,* 547

Banerjee, Sachchidananda. See *Chattopadhyay, Ghosh, Chattopadhyay, and Banerjee,* 529

Baxter, R. M., and **Quastel, J. H.** The enzymatic breakdown of *d*-biotin *in vitro,* 751

Beaton, J. R., Smith, F. I., and **McHenry, E. W.** Studies on vitamin B_6. II. The metabolism of amino acids in the vitamin B_6-deficient rat, 587

Beck, Stanley D. See *Harvey and Beck,* 765

Becker, Charles E., and **Day, Harry G.** Utilization of glucosone and the synthesis of glucosamine in the rat, 795

Bessman, Samuel P., Rossen, Jack, and **Layne, Ennis C.** γ-Aminobutyric acid-glutamic acid transamination in brain, 385

Bethell, Frank H. See *Swendseid, Swanson, and Bethell,* 803, 811

Birnbaum, Sanford M. See *Koegel, Birnbaum, Baker, Sober, and Greenstein,* 547

Bloch, Konrad. See *Snoke, Yanari, and Bloch,* 573

—. See *Yanari, Snoke, and Bloch,* 561

Bregoff, Herta M. See *Roberts and Bregoff,* 393

C

Camien, Merrill N., and **Dunn, Max S.** A D-lactic acid-requiring mutant of *Lactobacillus casei,* 621

Campbell, Donald J. See *Gould, Taylor, Hagerman, Warner, and Campbell,* 519

Carey, Gertrude C. See *Stein,* 45

Carló, Pierre-Emmanuel, and **Mandel, H. George.** The effect of azaguanine on the incorporation of guanine and of 4-amino-5-imidazolecarboxamide into tumor-bearing mice, 343

—. See *Mandel and Carló,* 335

Chaikoff, I. L. See *Tomkins, Sheppard, and Chaikoff,* 137

Charalampous, Frixos C., and **Mueller, Gerald C.** Synthesis of erythrulose phosphate by a soluble enzyme from rat liver, 161

Chattopadhyay, Dhurjatiprosad, Ghosh, Naresh Chandra, Chattopadhyay, Haripada, and **Banerjee, Sachchidananda.** Studies on the metabolism of nicotinic acid in rabbits, 529

Chattopadhyay, Haripada. See *Chattopadhyay, Ghosh, Chattopadhyay, and Banerjee,* 529

Cheldelin, Vernon H. See *Wang, Christensen, and Cheldelin,* 683

Christensen, Bert E. See *Wang, Christensen, and Cheldelin,* 683

Ciotti, Margaret M. See *Kaplan and Ciotti,* 785

Cohen, Philip P. See *Lichtenstein, Ross, and Cohen,* 117

Cohen, Seymour S. Studies on D-ribulose and its enzymatic conversion to D-arabinose, 71

Cohen, Stanley. A study of the synthesis of creatine by liver preparations, 93

Cohn, Mildred. A study of oxidative phosphorylation with O^{18}-labeled inorganic phosphate, 735

Conzelman, Gaylord M., Jr., Mandel, H. George, and **Smith, Paul K.** The incorporation of radiocarbon from 4-amino-5-imidazolecarboxamide into the purines of tumor-bearing mice, 329

Crane, Robert K., and **Lipmann, Fritz.** The effect of arsenate on aerobic phosphorylation, 235

— and —. The relationship of mitochondrial phosphate to aerobic phosphate bond generation, 245

D

Day, Harry G. See *Becker and Day*, 795

Deuel, Harry J., Jr. See *Rice, Schotz, Alfin-Slater, and Deuel*, 867

Dimant, E., Smith, Vearl R., and **Lardy, Henry A.** Lactose synthesis in the mammary gland perfused with 1-C^{14}-glucose, 85

Doherty, David G. The synthesis of glyconyl peptides, 857

Dorfman, Ralph I. See *Hayano and Dorfman*, 175

Dunn, Max S. See *Camien and Dunn*, 621

E

Elliott, W. H. Isolation of glutamine synthetase and glutamotransferase from green peas, 661

Elvehjem, C. A. See *Litwack, Williams, and Elvehjem*, 261

Engel, Lewis L. See *Slaunwhite, Engel, Scott, and Ham*, 615

F

Feigelson, Philip, and **Lines, B.** A study on the relationship between *l*-ascorbic acid and purine metabolism *in vivo*, 267

Fink, Kay. See *Fink, Fink, and Henderson*, 349

Fink, R. M., Fink, Kay, and **Henderson, Robert B.** β-Amino acid formation by tissue slices incubated with pyrimidines, 349

Fones, William S., and **Lee, Marguerite.** Hydrolysis of *N*-acyl derivatives of alanine and phenylalanine by acylase I and carboxypeptidase, 847

Friedman, Samuel, and **Gots, Joseph S.** The purine and pyrimidine metabolism of normal and phage-infected *Escherichia coli*, 125

G

George, Philip. Intermediate compound formation with peroxidase and strong oxidizing agents, 413

—. The third intermediate compound of horseradish peroxidase and hydrogen peroxide, 427

Gerarde, H. W., and **Jones, Marion.** The effect of cortisone on collagen synthesis *in vitro*, 553

Ghosh, Naresh Chandra. See *Chattopadhyay, Ghosh, Chattopadhyay, and Banerjee*, 529

Glock, Eugene, and **Jensen, Clifford O.** The colorimetric determination of plant succinic dehydrogenase, 271

Goldfarb, A. Robert. Absorption spectrum of the peptide bond. II. Influence of chain length, 317

Gornall, Allan G., and **Macdonald, M. Pamela.** Quantitative determination of the steroid hormones with 2,4-dinitrophenylhydrazine, 279

Gots, Joseph S. See *Friedman and Gots*, 125

Gould, R. Gordon, Taylor, C. Bruce, Hagerman, JoAnne S., Warner, Irving, and **Campbell, Donald J.** Cholesterol metabolism. I. Effect of dietary cholesterol on the synthesis of cholesterol in dog tissue *in vitro*, 519

Greenstein, Jesse P. See *Koegel, Birnbaum, Baker, Sober, and Greenstein*, 547

H

Hagerman, JoAnne S. See *Gould, Taylor, Hagerman, Warner, and Campbell*, 519

Hainline, Adrian, Jr., and **Lewis, Howard B.** Synthesis of hippuric acid

and benzoylglucuronide by the rabbit, 673

Ham, Claire L. See *Slaunwhite, Engel, Scott, and Ham,* 615

Harvey, George T., and **Beck, Stanley D.** Muscle succinoxidase in the American cockroach, 765

Hayano, Mika, and **Dorfman, Ralph I.** The enzymatic C-11β-hydroxylation of steroids, 175

Henderson, L. M., Koeppe, O. J., and **Zimmerman, Harriet H.** Niacin-tryptophan deficiency resulting from amino acid imbalance in non-casein diets, 697

Henderson, Robert B. See *Fink, Fink, and Henderson,* 349

Heneage, P. See *Umbreit and Heneage,* 15

Hickman, Jean. See *Ashwell and Hickman,* 651

Hummel, J. P. See *Ruliffson, Lang, and Hummel,* 839

J

Jensen, Clifford O. See *Glock and Jensen,* 271

Jones, Marion. See *Gerarde and Jones,* 553

K

Kalnitsky, George. The non-enzymatic oxidation of α-ketoglutarate. I. The effects of manganous ions and amino acids, 817

Kaplan, Nathan O., and **Ciotti, Margaret M.** Competitive inhibition of hydroxylamine on alcohol dehydrogenase, 785

—. See *Nason, Kaplan, and Oldewurtel,* 435

—. See *Shuster and Kaplan,* 535

Kennedy, Eugene P. Synthesis of phosphatides in isolated mitochondria, 399

Koegel, Robert J., Birnbaum, Sanford M., Baker, Carl G., Sober, Herbert A., and **Greenstein, Jesse P.** Conversion of β-chloroacetyl-L-diaminopropionic acid to L-2-ketopiperazine-5-carboxylic acid, 547

Koeppe, O. J. See *Henderson, Koeppe, and Zimmerman,* 697

L

Lang, Helga M. See *Ruliffson, Lang, and Hummel,* 839

Lardy, Henry A., and **Wellman, Harlene.** The catalytic effect of 2,4-dinitrophenol on adenosinetriphosphate hydrolysis by cell particles and soluble enzymes, 357

—. See *Dimant, Smith, and Lardy,* 85

Larson, Bruce L., and **Salisbury, G. W.** The reactive reducing components of semen; the presence of sulfite in bovine semen, 601

Layne, Ennis C. See *Bessman, Rossen, and Layne,* 385

Leanza, W. J., and **Pfister, Karl, 3rd.** The β-hydroxy-DL-glutamic acids, 377

Lee, Marguerite. See *Fones and Lee,* 847

Levy, Milton. See *Slobodian and Levy,* 371

Lewis, Howard B. See *Hainline and Lewis,* 673

Li, Choh Hao, and **Pedersen, Kai O.** Sedimentation behavior of hypophyseal growth hormone, 595

Lichtenstein, N., Ross, Helen E., and **Cohen, Philip P.** Effect of α-methylglutamic acid on the enzymatic synthesis and hydrolysis of glutamine, 117

Lines, B. See *Feigelson and Lines,* 267

Lipmann, Fritz. See *Crane and Lipmann,* 235, 245

Littlefield, J. W. See *Sanadi and Littlefield,* 103

Litwack, Gerald, Williams, J. N., Jr., and **Elvehjem, C. A.** The rôles of essential and non-essential amino acids in maintaining liver xanthine oxidase, 261

M

Macdonald, M. Pamela. See *Gornall and Macdonald,* 279

Mallov, Samuel, McKibbin, J. M., and **Robb, Jane Sands.** The distribution of some of the essential lipides in beef heart muscle and conducting tissue, 825

Mandel, H. George, and **Carló, Pierre-Emmanuel.** The incorporation of guanine into nucleic acids of tumor-bearing mice, 335

—. See *Carló and Mandel,* 343

—. See *Conzelman, Mandel, and Smith,* 329

Mason, Merle. The metabolism of tryptophan in riboflavin-deficient rats, 513

McCann, Harold G. Reactions of fluoride ion with hydroxyapatite, 247

McHenry, E. W. See *Beaton, Smith, and McHenry,* 587

McKibbin, J. M. See *Mallov, McKibbin, and Robb,* 825

—. See *Taylor and McKibbin,* 609

Mehler, Alan H., and **Tabor, Herbert.** Deamination of histidine to form urocanic acid in liver, 775

Mihályi, E. Trypsin digestion of muscle proteins. II. The kinetics of the digestion, 197

— and **Szent-Györgyi, Andrew G.** Trypsin digestion of muscle proteins. I. Ultracentrifugal analysis of the process, 189

— and —. III. Adenosinetriphosphatase activity and actin-binding capacity of the digested myosin, 211

Mueller, Gerald C. See *Charalampous and Mueller,* 161

Muntz, John A. The formation of ammonia in brain extracts, 221

N

Nagler, Mary E. See *Tidwell and Nagler,* 727

Nason, Alvin, Kaplan, Nathan O., and **Oldewurtel, Henry A.** Further studies of nutritional conditions affecting enzymatic constitution in *Neurospora,* 435

Neher, G. M. See *Noall, Salhanick, Neher, and Zarrow,* 321

Noall, Matthew W., Salhanick, Hilton A., Neher, G. M., and **Zarrow, M. X.** Method for the isolation of progesterone from human placentae, 321

O

Ochoa, Severo. See *Zelitch and Ochoa,* 707

Oldewurtel, Henry A. See *Nason, Kaplan, and Oldewurtel,* 435

P

Pedersen, Kai O. See *Li and Pedersen,* 595

Pfister, Karl, 3rd. See *Leanza and Pfister,* 377

Pogell, Burton M. A new synthesis of fructose-1-phosphate with phosphorus pentoxide, 645

Polis, B. David, and **Shmukler, H. W.** Crystalline lactoperoxidase. I. Isolation by displacement chromatography. II. Physicochemical and enzymatic properties, 475

Potter, Van R. See *Siekevitz and Potter,* 1

Q

Quastel, J. H. See *Baxter and Quastel,* 751

R

Rice, Leslie I., Schotz, Michael C., Alfin-Slater, Roslyn B., and **Deuel, Harry J., Jr.** Changes in cholesterol distribution in liver cell fractions of rats fed cholesterol, 867

Rittenberg, D. See *San Pietro and Rittenberg,* 445, 457

Robb, Jane Sands. See *Mallov, McKibbin, and Robb,* 825

Roberts, Eugene, and **Bregoff, Herta M.** Transamination of γ-aminobutyric acid and β-alanine in brain and liver, 393

Roberts, Sidney, and **Szego, Clara M.** The influence of steroids on uterine respiration and glycolysis, 21

Robertson, William van B., and **Schwartz, Barry.** Ascorbic acid and the formation of collagen, 689
Ross, Helen E. See *Lichtenstein, Ross, and Cohen,* 117
Rossen, Jack. See *Bessman, Rossen, and Layne,* 385
Rozsa, G. See *Spicer and Rozsa,* 639
Ruliffson, Willard S., Lang, Helga M., and **Hummel, J. P.** Radiochemical determination of ketosteroids, 839

S

Salhanick, Hilton A. See *Noall, Salhanick, Neher, and Zarrow,* 321
Salisbury, G. W. See *Larson and Salisbury,* 601
Samuels, Leo T. See *Wiswell and Samuels,* 155
Sanadi, D. R., and **Littlefield, J. W.** Studies on α-ketoglutaric oxidase. III. Rôle of coenzyme A and diphosphopyridine nucleotide, 103
San Pietro, Anthony, and **Rittenberg, D.** A study of the rate of protein synthesis in humans. I. Measurement of the urea pool and urea space, 445
— and —. II. Measurement of the metabolic pool and the rate of protein synthesis, 457
Schotz, Michael C. See *Rice, Schotz, Alfin-Slater, and Deuel,* 867
Schwartz, Barry. See *Robertson and Schwartz,* 689
Schwerdt, R. F. See *Wood and Schwerdt,* 501
Scott, J. F. See *Slaunwhite, Engel, Scott, and Ham,* 615
Seegmiller, J. E. Triphosphopyridine nucleotide-linked aldehyde dehydrogenase from yeast, 629
Sheppard, H. See *Tomkins, Sheppard, and Chaikoff,* 137
Shmukler, H. W. See *Polis and Shmukler,* 475
Shuster, Louis, and **Kaplan, Nathan O.** A specific *b* nucleotidase, 535
Siekevitz, Philip, and **Potter, Van R.** Intramitochondrial regulation of oxidative rate, 1
Simpson, Melvin V. The release of labeled amino acids from the proteins of rat liver slices, 143
Slaunwhite, Wilson R., Jr., Engel, Lewis L., Scott, J. F., and **Ham, Claire L.** Fluorescence and absorption spectra of estrogens heated in sulfuric acid, 615
Slobodian, Evelyn, and **Levy, Milton.** The sequence glycylalanylglycine in silk fibroin, 371
Smith, F. I. See *Beaton, Smith, and McHenry,* 587
Smith, Paul K. See *Conzelman, Mandel, and Smith,* 329
Smith, Phyllis. See *Stekol, Weiss, Smith, and Weiss,* 299
Smith, Vearl R. See *Dimant, Smith, and Lardy,* 85
Snoke, John E., Yanari, Sam, and **Bloch, Konrad.** Synthesis of glutathione from γ-glutamylcysteine, 573
—. See *Yanari, Snoke, and Bloch,* 561
Sober, Herbert A. See *Koegel, Birnbaum, Baker, Sober, and Greenstein,* 547
Spicer, Samuel S., and **Rozsa, G.** An electron microscope study of contractile muscle proteins, 639
Stein, William H. A chromatographic investigation of the amino acid constituents of normal urine, 45
Stekol, Jakob A., Weiss, Sidney, Smith, Phyllis, and **Weiss, Kathryn.** The synthesis of choline and creatine in rats under various dietary conditions, 299
Swanson, Ann L. See *Swendseid, Swanson, and Bethell,* 803, 811
Swendseid, Marian E., Swanson, Ann L., and **Bethell, Frank H.** Effect of chloramphenicol administration on rat liver xanthine oxidase, 811
—, —, and —. Ethionine as an inhibitor of enzyme systems mediating choline oxidation, 803
Szego, Clara M. See *Roberts and Szego,* 21
Szent-Györgyi, Andrew G. See *Mihályi and Szent-Györgyi,* 189, 211

T

Tabor, Herbert. See *Mehler and Tabor*, 775

Taylor, C. Bruce. See *Gould, Taylor, Hagerman, Warner, and Campbell*, 519

Taylor, Wanda E., and **McKibbin, J. M.** The determination of lipide inositol in animal tissues, 609

Terzian, Annette V. See *Roberts and Szego*, 21

Tidwell, Herbert C., and **Nagler, Mary E.** Effect of acetoacetate upon utilization of carbohydrate, 727

Tomkins, G. M., Sheppard, H., and **Chaikoff, I. L.** Cholesterol synthesis by liver. III. Its regulation by ingested cholesterol, 137

U

Umbreit, W. W., and **Heneage, P.** β-Hydroxyglutamic acid decarboxylase, 15

W

Wang, Chih H., Christensen, Bert E., and **Cheldelin, Vernon H.** Conversion of acetate and pyruvate to glutamic acid in yeast, 683

Warner, Irving. See *Gould, Taylor, Hagerman, Warner, and Campbell*, 519

Weiss, Benjamin. Utilization of radioactive iodide by cell-free preparations of beef thyroid tissue, 31

Weiss, Kathryn. See *Stekol, Weiss, Smith, and Weiss*, 299

Weiss, Sidney. See *Stekol, Weiss, Smith, and Weiss*, 299

Wellman, Harlene. See *Lardy and Wellman*, 357

Williams, J. N., Jr. See *Litwack, Williams, and Elvehjem*, 261

Wiswell, John G., and **Samuels, Leo T.** The metabolism of progesterone by liver tissue *in vitro*, 155

Wood, W. A., and **Schwerdt, R. F.** Carbohydrate oxidation by *Pseudomonas fluorescens*. I. The mechanism of glucose and gluconate oxidation, 501

Y

Yanari, Sam, Snoke, John E., and **Bloch, Konrad.** Energy sources in glutathione synthesis, 561

—. See *Snoke, Yanari, and Bloch*, 573

Z

Zarrow, M. X. See *Noall, Salhanick, Neher, and Zarrow*, 321

Zelitch, I. Oxidation and reduction of glycolic and glyoxylic acids in plants. II. Glyoxylic acid reductase, 719

— and **Ochoa, Severo.** Oxidation and reduction of glycolic and glyoxylic acids in plants. I. Glycolic acid oxidase, 707

Zimmerman, Harriet H. See *Henderson, Koeppe, and Zimmerman*, 697

INDEX TO SUBJECTS

A

Acetate: Yeast glutamic acid from, *Wang, Christensen, and Cheldelin,* 683

Acetoacetate: Carbohydrate utilization, effect, *Tidwell and Nagler,* 727

Actin: -Binding, myosin, trypsin-digested, adenosinetriphosphatase relation, *Mihályi and Szent-Györgyi,* 211

Acylase: I, alanine and phenylalanine *N*-acyl derivatives, hydrolysis, effect, *Fones and Lee,* 847

Adenosinetriphosphatase: Myosin, trypsin-digested, actin-binding capacity, relation, *Mihályi and Szent-Györgyi,* 211

Spleen, Roentgen ray irradiation, effect, *Ashwell and Hickman,* 651

Adenosinetriphosphate: Hydrolysis, 2,4-dinitrophenol effect, *Lardy and Wellman,* 357

Alanine: *N*-Acyl derivatives, hydrolysis, acylase I and carboxypeptidase effect, *Fones and Lee,* 847

β-, brain, transamination, *Roberts and Bregoff,* 393

—, liver, transamination, *Roberts and Bregoff,* 393

Alcohol dehydrogenase: Hydroxylamine effect, *Kaplan and Ciotti,* 785

Aldehyde dehydrogenase: -Linked triphosphopyridine nucleotide, yeast, *Seegmiller,* 629

Amine: Hydroxyl-. *See* Hydroxylamine

Amino acid(s): β-, formation, tissues, *in vitro,* pyrimidines, effect, *Fink, Fink, and Henderson,* 349

α-Ketoglutarate oxidation, non-enzymatic, effect, *Kalnitsky,* 817

Labeled, liver proteins, release, *Simpson,* 143

Liver xanthine oxidase, rôle, *Litwack, Williams, and Elvehjem,* 261

Amino acid(s)—*continued:*

Metabolism, vitamin B_6 deficiency, *Beaton, Smith, and McHenry,* 587

Niacin-tryptophan deficiency, relation, *Henderson, Koeppe, and Zimmerman,* 697

Urine, chromatography, *Stein,* 45

Aminobutyric acid: γ-, brain, transamination, *Roberts and Bregoff,* 393

—, glutamic acid and, transamination, brain, *Bessman, Rossen, and Layne,* 385

—, liver, transamination, *Roberts and Bregoff,* 393

Amino-5-imidazolecarboxamide: 4-, incorporation, tumor-bearing mice, azaguanine effect, *Carló and Mandel,* 343

—, radiocarbon incorporation into purines, tumor-bearing mice, *Conzelman, Mandel, and Smith,* 329

Ammonia: Formation, brain, *Muntz,* 221

Apatite: Hydroxy-. *See* Hydroxyapatite

Arabinose: D-, D-ribulose conversion to, enzymatic, *Cohen,* 71

Arsenate: Phosphorylation, aerobic, effect, *Crane and Lipmann,* 235

Ascorbic acid: Collagen formation, relation, *Robertson and Schwartz,* 689

l-, purine metabolism and, relation, *Feigelson and Lines,* 267

Azaguanine: Guanine and 4-amino-5-imidazolecarboxamide incorporation into tumor-bearing mice, effect, *Carló and Mandel,* 343

B

Bacillus: *See also Lactobacillus*

Bacteria: *See also Escherichia, Pseudomonas*

Benzoylglucuronide: Synthesis *in vivo, Hainline and Lewis,* 673

Biotin: *d*-, enzymatic breakdown *in vitro*, *Baxter and Quastel*, 751
Brain: β-Alanine transamination, *Roberts and Bregoff*, 393
γ-Aminobutyric acid-glutamic acid transamination, *Bessman, Rossen, and Layne*, 385
γ-Aminobutyric acid transamination, *Roberts and Bregoff*, 393
Ammonia formation, *Muntz*, 221
Butyric acid: γ-Amino-. *See* Aminobutyric acid

C

Carbohydrate(s): Oxidation, *Pseudomonas fluorescens, Wood and Schwerdt*, 501
Utilization, acetoacetate effect, *Tidwell and Nagler*, 727
Carboxamide: 4-Amino-5-imidazole-. *See* Amino-5-imidazolecarboxamide
Carboxylic acid: L-2-Ketopiperazine-5-. *See* Ketopiperazine-5-carboxylic acid
Carboxypeptidase: Alanine and phenylalanine *N*-acyl derivatives, hydrolysis, effect, *Fones and Lee*, 847
Chloramphenicol: Liver xanthine oxidase, effect, *Swendseid, Swanson, and Bethell*, 811
Chloroacetyl-L-diaminopropionic acid: β-, L-2-ketopiperazine-5-carboxylic acid, conversion from, *Koegel, Birnbaum, Baker, Sober, and Greenstein*, 547
Cholesterol: Liver, dietary cholesterol effect, *Rice, Schotz, Alfin-Slater, and Deuel*, 867
Metabolism, *Gould, Taylor, Hagerman, Warner, and Campbell*, 519
Synthesis *in vitro*, dietary cholesterol effect, *Gould, Taylor, Hagerman, Warner, and Campbell*, 519
—, liver, *Tomkins, Sheppard, and Chaikoff*, 137
—, —, dietary cholesterol effect, *Tomkins, Sheppard, and Chaikoff*, 137
Choline: Oxidation, enzyme-mediated, ethionine effect, *Swendseid, Swanson, and Bethell*, 803
Synthesis, diet effect, *Stekol, Weiss, Smith, and Weiss*, 299
Cockroach: Muscle succinoxidase, *Harvey and Beck*, 765
Coenzyme: A, α-ketoglutaric oxidase, effect, *Sanadi and Littlefield*, 103
Collagen: Formation, ascorbic acid relation, *Robertson and Schwartz*, 689
Synthesis *in vitro*, cortisone effect, *Gerarde and Jones*, 553
Cortisone: Collagen synthesis *in vitro*, effect, *Gerarde and Jones*, 553
Creatine: Synthesis, diet effect, *Stekol, Weiss, Smith, and Weiss*, 299
—, liver, *Cohen*, 93
Cysteine: γ-Glutamyl-. *See* Glutamylcysteine

D

Decarboxylase: β-Hydroxyglutamic acid. *See* Hydroxyglutamic acid decarboxylase
Dehydrogenase: Alcohol. *See* Alcohol dehydrogenase
Aldehyde. *See* Aldehyde dehydrogenase
Succinic. *See* Succinic dehydrogenase
Diet: Choline and creatine synthesis, effect, *Stekol, Weiss, Smith, and Weiss*, 299
Dinitrophenol: 2,4-, adenosinetriphosphate hydrolysis, effect, *Lardy and Wellman*, 357
Dinitrophenylhydrazine: 2,4-, steroid hormones, determination, use, *Gornall and Macdonald*, 279
Diphosphopyridine nucleotide: α-Ketoglutaric oxidase, effect, *Sanadi and Littlefield*, 103

E

Enzyme(s): *d*-Biotin breakdown *in vitro*, effect, *Baxter and Quastel*, 751
Co-. *See* Coenzyme
Glutamine synthesis and hydrolysis, α-methylglutamic acid effect, *Lichtenstein, Ross, and Cohen*, 117
Liver, soluble, erythrulose synthesis, *Charalampous and Mueller*, 161
-Mediated choline oxidation, ethionine effect, *Swendseid, Swanson, and Bethell*, 803
Neurospora, nutrition effect, *Nason, Kaplan, and Oldewurtel*, 435

Enzyme(s)—*continued:*
D-Ribulose conversion to D-arabinose, *Cohen*, 71
C-11β-Steroids, hydroxylation, *Hayano and Dorfman*, 175
See also Acylase, Adenosinetriphosphatase, etc.
Erythrulose phosphate: Synthesis, liver soluble enzyme, *Charalampous and Mueller*, 161
Escherichia coli: Phage-infected, purine and pyrimidine metabolism, *Friedman and Gots*, 125
Estrogen(s): Absorption spectra, sulfuric acid effect, *Slaunwhite, Engel, Scott, and Ham*, 615
Fluorescence, sulfuric acid effect, *Slaunwhite, Engel, Scott, and Ham*, 615
Separation, chromatographic, *Axelrod*, 59
Ethionine: Choline oxidation, enzyme-mediated, effect, *Swendseid, Swanson, and Bethell*, 803

F

Fibroin: Silk, glycylalanylglycine sequence, *Slobodian and Levy*, 371
Fluoride: Ion, hydroxyapatite and, reactions, *McCann*, 247
Fructose-1-phosphate: Synthesis, phosphorus pentoxide use, *Pogell*, 645

G

Gluconate: Oxidation mechanism, *Pseudomonas fluorescens, Wood and Schwerdt*, 501
Glucosamine: Biosynthesis, glucosone relation, *Becker and Day*, 795
Glucose: 1-C^{14}-, mammary gland lactose, synthesis, effect, *Dimant, Smith, and Lardy*, 85
Oxidation mechanism, *Pseudomonas fluorescens, Wood and Schwerdt*, 501
Glucosone: Glucosamine biosynthesis, relation, *Becker and Day*, 795
Glucuronide: Benzoyl-. *See* Benzoylglucuronide
Glutamic acid: γ-Aminobutyric acid and, transamination, brain, *Bessman, Rossen, and Layne*, 385
Glutamic acid—*continued:*
β-Hydroxy-DL-. *See* Hydroxy-DL-glutamic acid
α-Methyl-. *See* Methylglutamic acid
Yeast, acetate and pyruvate conversion to, *Wang, Christensen, and Cheldelin*, 683
Glutamine: Hydrolysis, enzymatic, α-methylglutamic acid effect, *Lichtenstein, Ross, and Cohen*, 117
Synthesis, enzymatic, α-methylglutamic acid effect, *Lichtenstein, Ross, and Cohen*, 117
Glutamine synthetase: Peas, *Elliott*, 661
Glutamotransferase: Peas, *Elliott*, 661
Glutamylcysteine: γ-, glutathione synthesis from, *Snoke, Yanari, and Bloch*, 573
Glutarate: α-Keto-. *See* Ketoglutarate
Glutathione: Synthesis, energy sources, *Yanari, Snoke, and Bloch*, 561
— from γ-glutamylcysteine, *Snoke, Yanari, and Bloch*, 573
Glycine: Glycylalanyl-. *See* Glycylalanylglycine
Glycolic acid: Plant, oxidation and reduction, *Zelitch and Ochoa*, 707
Zelitch, 719
—, — — —, glycolic acid oxidase effect, *Zelitch and Ochoa*, 707
—, — — —, glyoxylic acid reductase effect, *Zelitch*, 719
Glycolic acid oxidase: Plant, glycolic and glyoxylic acid oxidation and reduction, effect, *Zelitch and Ochoa*, 707
Glycolysis: Uterus, steroids, effect, *Roberts and Szego*, 21
Glyconyl peptide(s): Synthesis, *Doherty*, 857
Glycylalanylglycine: Silk fibroin, sequence, *Slobodian and Levy*, 371
Glyoxylic acid: Plant, oxidation and reduction, *Zelitch and Ochoa*, 707
Zelitch, 719
—, — — —, glycolic acid oxidase effect, *Zelitch and Ochoa*, 707
—, — — —, glyoxylic acid reductase effect, *Zelitch*, 719

Glyoxylic acid reductase: Plant, glycolic and glyoxylic acid oxidation and reduction, effect, *Zelitch*, 719
Growth: Hormone, pituitary, sedimentation, *Li and Pedersen*, 595
Guanine: Aza-. *See* Azaguanine
Incorporation, tumor-bearing mice, azaguanine effect, *Carló and Mandel*, 343
Nucleic acids from, tumor-bearing mice, *Mandel and Carló*, 335

H

Heart: Lipides, essential, *Mallov, McKibbin, and Robb*, 825
Hippuric acid: Synthesis *in vivo*, *Hainline and Lewis*, 673
Histidine: Deamination, liver urocanic acid formation, relation, *Mehler and Tabor*, 775
Horseradish: Peroxidase, hydrogen peroxide and, intermediate compound, *George*, 427
Hydrazine: 2,4-Dinitrophenyl-. *See* Dinitrophenylhydrazine
Hydrogen peroxide: Horseradish peroxidase and, intermediate compound, *George*, 427
Hydroxyapatite: Fluoride ion and, reactions, *McCann*, 247
Hydroxy-DL-glutamic acid(s): β-, *Leanza and Pfister*, 377
Hydroxyglutamic acid decarboxylase: β-, *Umbreit and Heneage*, 15
Hydroxylamine: Alcohol dehydrogenase, effect, *Kaplan and Ciotti*, 785
Hypophysis: *See* Pituitary

I

Inositol: Lipide, tissue, determination, *Taylor and McKibbin*, 609
Iodide: Radioactive, thyroid, utilization, *Weiss*, 31

K

Ketoglutarate: α-, oxidation, manganous ions and amino acids, effect, *Kalnitsky*, 817
—, —, non-enzymatic, *Kalnitsky*, 817
Ketoglutaric oxidase: α-, *Sanadi and Littlefield*, 103
—, coenzyme A and diphosphopyridine nucleotide, rôle, *Sanadi and Littlefield*, 103
Ketopiperazine-5-carboxylic acid: L-2-, β-chloroacetyl-L-diaminopropionic acid conversion to, *Koegel, Birnbaum, Baker, Sober, and Greenstein*, 547
Ketosteroid(s): Determination, radiochemical, *Ruliffson, Lang, and Hummel*, 839

L

Lactic acid: D-, *Lactobacillus casei* mutant requiring, *Camien and Dunn*, 621
Lactobacillus casei: D-Lactic acid-requiring mutant, *Camien and Dunn*, 621
Lactoperoxidase: Crystalline, *Polis and Shmukler*, 475
—, isolation, chromatographic, *Polis and Shmukler*, 475
—, physicochemical and enzymatic properties, *Polis and Shmukler*, 475
Lactose: Mammary gland, synthesis, 1-C^{14}-glucose effect, *Dimant, Smith, and Lardy*, 85
Lipide(s): Essential, heart, *Mallov, McKibbin, and Robb*, 825
Inositol, tissue, determination, *Taylor and McKibbin*, 609
Liver: β-Alanine transamination, *Roberts and Bregoff*, 393
γ-Aminobutyric acid transamination, *Roberts and Bregoff*, 393
Cholesterol, dietary cholesterol effect, *Rice, Schotz, Alfin-Slater, and Deuel*, 867
— synthesis, *Tomkins, Sheppard, and Chaikoff*, 137
— —, dietary cholesterol effect, *Tomkins, Sheppard, and Chaikoff*, 137
Creatine synthesis, *Cohen*, 93
Enzyme, soluble, erythrulose synthesis, *Charalampous and Mueller*, 161

Liver—*continued:*
Progesterone metabolism *in vitro*, *Wiswell and Samuels*, 155
Proteins, amino acids, labeled, release, *Simpson*, 143
Urocanic acid, formation, histidine deamination, relation, *Mehler and Tabor*, 775
Xanthine oxidase, amino acid rôle, *Litwack, Williams, and Elvehjem*, 261
— —, chloramphenicol effect, *Swendseid, Swanson, and Bethell*, 811

M

Mammary gland: Lactose synthesis, 1-C^{14}-glucose effect, *Dimant, Smith, and Lardy*, 85
Manganous ion(s): α-Ketoglutarate oxidation, non-enzymatic, effect, *Kalnitsky*, 817
Methylglutamic acid: α-, glutamine enzymatic synthesis and hydrolysis, effect, *Lichtenstein, Ross, and Cohen*, 117
Mitochondrion: Oxidation, regulation, *Siekevitz and Potter*, 1
Phosphate, aerobic phosphate bond generation, relation, *Crane and Lipmann*, 245
Phosphatide synthesis, *Kennedy*, 399
Mold: *See also Neurospora*
Muscle: Protein, electron microscope study, *Spicer and Rozsa*, 639
—, trypsin digestion, *Mihályi and Szent-Györgyi*, 189
Mihályi, 197
Mihályi and Szent-Györgyi, 211
—, — —, kinetics, *Mihályi*, 197
—, — —, ultracentrifugal analysis, *Mihályi and Szent-Györgyi*, 189
Succinoxidase, cockroach, *Harvey and Beck*, 765
See also Heart
Myosin: Trypsin-digested, actin-binding capacity and adenosinetriphosphatase relation, *Mihályi and Szent-Györgyi*, 211

N

Neurospora: Enzymes, nutrition effect, *Nason, Kaplan, and Oldewurtel*, 435
Niacin: -Tryptophan deficiency, dietary amino acid imbalance, effect, *Henderson, Koeppe, and Zimmerman*, 697
Nicotinic acid: Metabolism, *Chattopadhyay, Ghosh, Chattopadhyay, and Banerjee*, 529
Nucleic acid(s): Guanine incorporation into, tumor-bearing mice, *Mandel and Carló*, 335
Nucleotidase: *b*, specific, *Shuster and Kaplan*, 535
Nucleotide: Diphosphopyridine. *See* Diphosphopyridine nucleotide
Triphosphopyridine. *See* Triphosphopyridine nucleotide
Nutrition: *Neurospora* enzymes, effect, *Nason, Kaplan, and Oldewurtel*, 435

O

Oxidase: Glycolic acid. *See* Glycolic acid oxidase
α-Ketoglutaric. *See* Ketoglutaric oxidase
Succin-. *See* Succinoxidase
Xanthine. *See* Xanthine oxidase
Oxidizing agent(s): Strong, intermediate compound formation, *George*, 413

P

Pea: Glutamine synthetase, *Elliott*, 661
Glutamotransferase, *Elliott*, 661
Peptidase: Carboxy-. *See* Carboxypeptidase
Peptide(s): Bond, absorption spectrum, *Goldfarb*, 317
—, — —, chain length effect, *Goldfarb*, 317
Glyconyl. *See* Glyconyl peptide
Peroxidase: Horseradish, hydrogen peroxide and, intermediate compound, *George*, 427

Peroxidase—*continued:*
Intermediate compound formation, *George*, 413
Lacto-. *See* Lactoperoxidase
Phage: -Infected *Escherichia coli*, purine and pyrimidine metabolism, *Friedman and Gots*, 125
Phenol: 2,4-Dinitro-. *See* Dinitrophenol
Phenylalanine: *N*-Acyl derivatives, hydrolysis, acylase I and carboxypeptidase effect, *Fones and Lee*, 847
Phosphatase: Adenosinetri-. *See* Adenosinetriphosphatase
Phosphate(s): Adenosinetri-. *See* Adenosinetriphosphate
Inorganic, O^{18}-labeled, oxidative phosphorylation, use in study, *Cohn*, 735
Phosphate bond: Generation, aerobic, mitochondrial phosphate relation, *Crane and Lipmann*, 245
Phosphatide(s): Synthesis, mitochondria, *Kennedy*, 399
Phosphorylation: Aerobic, arsenate effect, *Crane and Lipmann*, 235
Oxidative, inorganic phosphate, O^{18}-labeled, use in study, *Cohn*, 735
Pituitary: Growth hormone, sedimentation, *Li and Pedersen*, 595
Placenta: Progesterone isolation, *Noall, Salhanick, Neher, and Zarrow*, 321
Plant(s): Glycolic acid oxidation and reduction, *Zelitch and Ochoa*, 707
Zelitch, 719
— and glyoxylic acid oxidation and reduction, glycolic acid oxidase effect, *Zelitch and Ochoa*, 707
— — — — oxidation and reduction, glyoxylic acid reductase effect, *Zelitch*, 719
Glyoxylic acid oxidation and reduction, *Zelitch and Ochoa*, 707
Zelitch, 719
Succinic dehydrogenase, determination, colorimetric, *Glock and Jensen*, 271
Progesterone: Metabolism, liver, *in vitro*, *Wiswell and Samuels*, 155
Placenta, isolation, *Noall, Salhanick, Neher, and Zarrow*, 321
Propionic acid: β-Chloroacetyl-L-diamino-. *See* Chloroacetyl-L-diaminopropionic acid
Protein(s): Liver, amino acids, labeled, release, *Simpson*, 143
Metabolic pool, *San Pietro and Rittenberg*, 457
Muscle, electron microscope study, *Spicer and Rozsa*, 639
—, trypsin digestion, *Mihályi and Szent-Györgyi*, 189
Mihályi, 197
Mihályi and Szent-Györgyi, 211
—, — —, kinetics, *Mihályi*, 197
—, — —, ultracentrifugal analysis, *Mihályi and Szent-Györgyi*, 189
Synthesis rate, *San Pietro and Rittenberg*, 457
— —, humans, *San Pietro and Rittenberg*, 445, 457
Pseudomonas fluorescens: Carbohydrate oxidation, *Wood and Schwerdt*, 501
Gluconate oxidation, mechanism, *Wood and Schwerdt*, 501
Glucose oxidation, mechanism, *Wood and Schwerdt*, 501
Purine(s): 4-Amino-5-imidazolecarboxamide radiocarbon incorporation into, tumor-bearing mice, *Conzelman, Mandel, and Smith*, 329
Metabolism, *l*-ascorbic acid and, relation, *Feigelson and Lines*, 267
—, *Escherichia coli*, phage-infected, *Friedman and Gots*, 125
Pyrimidine(s): β-Amino acid formation, tissues, *in vitro*, effect, *Fink, Fink, and Henderson*, 349
Metabolism, *Escherichia coli*, phage-infected, *Friedman and Gots*, 125
Pyruvate: Yeast glutamic acid from, *Wang, Christensen, and Cheldelin*, 683

R

Reductase: Glyoxylic acid. *See* Glyoxylic acid reductase
Riboflavin: Tryptophan metabolism, deficiency effect, *Mason*, 513
Ribulose: D-, D-arabinose conversion from, enzymatic, *Cohen*, 71

S

Semen: Reducing components, *Larson and Salisbury*, 601
Sulfite, *Larson and Salisbury*, 601
Silk: Fibroin, glycylalanylglycine sequence, *Slobodian and Levy*, 371
Spleen: Adenosinetriphosphatase, Roentgen ray irradiation, effect, *Ashwell and Hickman*, 651
Steroid(s): C-11β-, hydroxylation, enzymatic, *Hayano and Dorfman*, 175
Hormones, determination, 2,4-dinitrophenylhydrazine use, *Gornall and Macdonald*, 279
Keto-. *See* Ketosteroid
Uterus respiration and glycolysis, effect, *Roberts and Szego*, 21
Succinic dehydrogenase: Plant, determination, colorimetric, *Glock and Jensen*, 271
Succinoxidase: Muscle, cockroach, *Harvey and Beck*, 765
Sulfite: Semen, *Larson and Salisbury*, 601
Synthetase: Glutamine. *See* Glutamine synthetase

T

Thyroid: Iodide, radioactive, utilization, *Weiss*, 31
Transferase: Glutamo-. *See* Glutamotransferase
Triphosphopyridine nucleotide: -Linked aldehyde dehydrogenase, yeast, *Seegmiller*, 629
Trypsin: Muscle protein, digestion, *Mihályi and Szent-Györgyi*, 189
Mihályi, 197
Mihályi and Szent-Györgyi, 211
— —, —, kinetics, *Mihályi*, 197
— —, —, ultracentrifugal analysis, *Mihályi and Szent-Györgyi*, 189
Tryptophan: Metabolism, riboflavin deficiency effect, *Mason*, 513
Niacin-, deficiency, dietary amino acid imbalance, effect, *Henderson, Koeppe, and Zimmerman*, 697
Tumor: -Bearing mice, 4-amino-5-imidazolecarboxamide radiocarbon incorporation into purines, *Conzelman, Mandel, and Smith*, 329
— —, guanine and 4-amino-5-imidazolecarboxamide incorporation, azaguanine effect, *Carló and Mandel*, 343
— —, — incorporation into nucleic acids, *Mandel and Carló*, 335

U

Urea: Body, *San Pietro and Rittenberg*, 445
Urine: Amino acids, chromatography, *Stein*, 45
Urocanic acid: Liver, formation, histidine deamination, relation, *Mehler and Tabor*, 775
Uterus: Glycolysis, steroids, effect, *Roberts and Szego*, 21
Respiration, steroids, effect, *Roberts and Szego*, 21

V

Vitamin(s): B_6, *Beaton, Smith, and McHenry*, 587
—, amino acid metabolism, deficiency effect, *Beaton, Smith, and McHenry*, 587
C. *See also* Ascorbic acid

X

Xanthine oxidase: Liver, amino acid rôle, *Litwack, Williams, and Elvehjem*, 261
—, chloramphenicol effect, *Swendseid, Swanson, and Bethell*, 811

Y

Yeast: Glutamic acid, acetate and pyruvate conversion to, *Wang, Christensen, and Cheldelin*, 683
Triphosphopyridine nucleotide-linked aldehyde dehydrogenase, *Seegmiller*, 629
